

RIGGING

Acrobatic lunge:

This had been installed as an acrobatic lunge, for example for partner acrobatics, banquine, Russian bar or trapeze. It is not allowed to use the lunge to rig any aerial equipment nor to take the rope or carabiners off.

After use it should be pulled up again and stowed on the balcony and tied to the truss with a clove hitch.

Extra rigging material

There are roundslings in different sizes, delta quick links and carabiners to use in case you don't have enough equipment.

Only use a carabiner if you choke the sling (pull it through itself), if you basket a sling and both ends need to be attached use a delta quick link, because you will triload a carabiner if you use it in that situation.
